ANIKET DEENANATH SINGH

Stony Brook, NY | +91(702)-831-9985 | work.aniketdsingh@gmail.com | LinkedIn

EDUCATION

Stony Brook University
Master of Science in Computer Engineering, GPA: 3.93/4.00 — Jan 2024 – Dec 2025

- Relevant Coursework: Deep Learning Algorithms, VLSI Design (C++), Digital Image Processing, Computer and Robot Vision

University of Mumbai
Bachelor of Engineering in Information Technology, GPA: 9.30/10.00 — Aug 2017 - Jun 2021

- Relevant Coursework: Data Structures and Algorithms, Operating Systems, Computer Networks, Databases, Java Lab

TECHNICAL SKILLS

Languages: Python, SQL, Typescript, Javascript, Java
Frameworks: Keras, Tensorflow, Flask, Angular, Node.js
Database Tools: Oracle Enterprise DB, SQLite, MYSQL
Developer Tools: Dockers, Git, AWS, VScode, Gemini Agent
Others: Deep Learning, Computer Vision, Backend
Libraries: Pandas, NumPy, Matplotlib, OpenCV, scikit-learn

WORK EXPERIENCE

Google — New York City, NY
Software Engineer – Intern — May 2025 - Aug 2025

- Engineered **multi-select** functionality on the timeline for **Google Vids**, a key enhancement for the AI-powered video editor
- Implemented crucial back-end and middleware logic in **Java** for selection models, a shared codebase used across core Google Workspace products like Slides and Sheets
- Developed **JavaScript** functionality to manage user interactions on timeline, ensuring fluid editing experiences for end users
- Wrote comprehensive **unit-tests** using **Gemini Agent** to ensure production-ready code and utilized **experimentation flags** to enable a controlled, phased rollout of new features
- Resolved critical production bugs, reinforcing product stability and maintaining a seamless experience for millions of users
- Presented the new features to **multiple cross-functional teams** like Slides to align on release strategy and gather feedback

SUNY Research Foundation — Stony Brook, NY
Research Assistant – AIML — May 2024-Present

- Developed computer vision pipeline for iOS app features for SeeMe, a cutting-edge platform employing computer vision and machine learning to detect consciousness through facial micro-movement analysis using Swift, Opencv, Python and Tensorflow
- Assisted in translating and optimizing legacy Fortran code for ray tracing and SSA (Single Scattering Albedo) codes to Python, implementing multi-dimensional interpolation techniques for atmospheric data analysis

LTIMindtree (formerly Larsen and Toubro Infotech) — Mumbai, India
Senior Software Engineer — Jul 2021 - Jan 2024

- Spearheaded development for AutoDB+, an automation tool for application and database management
- Integrated Oracle Digital Assistant (ODA) Conversational AI bot with REST APIs of tool allowing chatbot based access to AutoDB+
- Designed and deployed more than 50 REST APIs using Python, Flask and Oracle Enterprise Database for AutoDB+
- Reduced application load time by 10% through in-memory caching and optimizing database queries for AutoDB+
- Parallelized independent stage processing using threading and reduce the stage processing time by 20%
- Modularized the codebase increasing the understandability and understandability of the software and its impact

Myracle.io (formerly Cerebranium) — Berlin, Germany
Machine Learning Intern — Dec 2020 - May 2021

- Created a dataset of 900k Human Faces from using feature extraction techniques covering multiple use cases
- Designed a deep learning pipeline utilizing convolutional and fully connected layers for head pose estimation
- Applied Augmentation, Batch Normalization and Adaptive Learning Rate techniques to improve Model Robustness
- Contributed to research team's efforts in gesture and movement detection through application of Google Vision API
- Improved AI Proctoring accuracy by 7% and Deployed the Pipeline using Dockers, EC2 Engine and Tensorflow

ACADEMIC PROJECTS

Marketing Simulator | Python, Flask, Angular, SQLite, Gojs | Link — Feb 2020 - Feb 2021

- Developed a Marketing Simulator front end using Angular 8 with a visual drag-and-drop interface for campaign strategy design
- Integrated REST APIs using Flask to ensure cohesive data handling between the User Interface and database
- Implemented a predictive regression model using Scikit-Learn, achieving 92% accuracy in marketing trend forecasts

Emotion Detector | Python, Keras, SKLearn, OpenCV | Link — May 2020 - Jun 2020

- Developed a convolutional neural network-based tool to classify emotions into 5 distinct categories based on facial features
- Processed more than 5k frames of facial video data to detect different emotions and create a robust dataset
- Demonstrated a 91% precision rate in classifying a comprehensive range of human emotions within a diverse dataset
